NOTES

- With a correct tightening torque, it can be used as an overload protection device.
- The functionality is ensured only by using circular wire strand ropes of the 10820 and 10830 series.
- The value F_{rk} kN denotes the minimum slip force. Increasing the tightening torque of the screws increases the clamping force.
- The user is responsible for independently verifying the correct installation and ensuring the appropriate rope diameter. Please refer to the instructions in the installation manual.
